## INTRODUCTION

Power Futures Market is based on “continuous trade” method and physical delivery. It is designed to protect market participants from counterparty risk by EPİAŞ’s central counter party service.

Futures trade can be made in organized markets as well as in over the counter (OTC) market in terms of bilateral contracts. OTC trades involves counterparty risk and all of them are not published regularly therefore price discovery function is not fulfilled.

Market participants are able balance their portfolio and make physical optimization in spot electricity markets. Furthermore market participants are able to protect themselves against price risk by hedging and have insight to futures prices (price discovery). Therefore power spot and power futures markets can be considered as mutually complementary and they fulfill different needs of the market participants.

Matchings on the power futures market contracts bring the physical delivery obligation of the electricity energy corresponding to the power of 0,1 MW (1 lot) and multiples of it per hour in the particular bidding zone throughout the hours covered by the load type in the delivery period to the trading parties.

Base load futures contracts for month, quarter and year delivery periods are available for market participants to trade within the Power Futures Market. Contracts for different delivery periods and load types can be opened for trade in the forthcoming period.

Process	Start Time	End Time
License Check	09:00	09:05
Pre-Seance	10:00	12:59
Collateral Check	12:00	12:05
Pre-Seance Order Verification	12:45	12:59
Intra-Seance	13:00	16:00
DIP Calculation and Publication	16:00	16:45
End of Day Operations	16:45	17:00

Table 1: Power Futures Market Processes

- **License Check**: It is the process where the licenses of the organizations registered to PFM are checked. The active contracts available for trade are displayed to organizations according to license end dates.
- **Pre-Seance**: Market participants are able to make passive or cancel their suspended orders within the pre-seance process. Active order submission is not allowed in this process.
- **Collateral Check**: Market participant’s collateral status is updated according to collateral data received from TAKASBANK. According to collateral sufficiency, it is determined whether the market participant is in default or not.
- **Pre-Seance Order Verification**: Organization’s suspended order(s) coming from the last seance day enter in the process of order verification. In this process market participants can not make operations for their orders.
- **Intra Seance**: It is the process where the organizations submit orders and orders are matched. In this process it is possible to trade on the active contracts which are displayed on the order book. Trade registration entry can be made.

- **DIP Calculation and Publication**: It is the process where the DIP is calculated based on the prices of matchings and active bid/ask orders during the seance and published. If there are not sufficient matchings and orders for calculating the DIP, the market operator applies the survey and/or the auction methods for calculating the DIP in this process.
- **End of Day Operations**: Prices of the remaining active orders are controlled whether they are within the daily price change limits which are calculated by the new published DIPs. The orders are cancelled if their order prices are out of the daily price change limits. The orders are suspended if their order prices are within the daily price change limits. The market participants are not able to submit orders in this process. Required collateral amount is calculated for each market participant by using the new DIPs and open positions. Calculated collateral amounts are sent to TAKASBANK.

## 1. EKYS Operations

In order to make transactions in the Power Futures Market (PFM), the user of the market participant needs to have authorization in EKYS. Operations of changing authorization or granting authorization to unauthorized user are made via “Authorization Group Operations” in EKYS. Authorizations are defined only by PK admin.

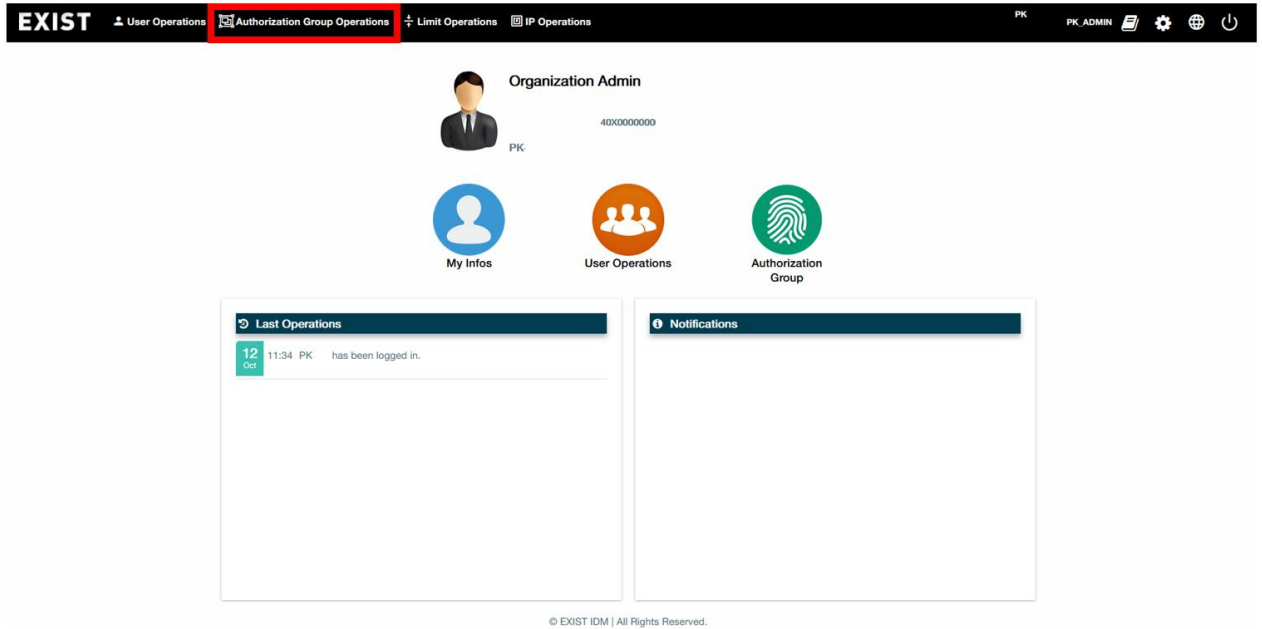

Figure 1: EKYS Authorization Group Operations

- Authorization page is viewed via “Authorization Group Operations” heading.

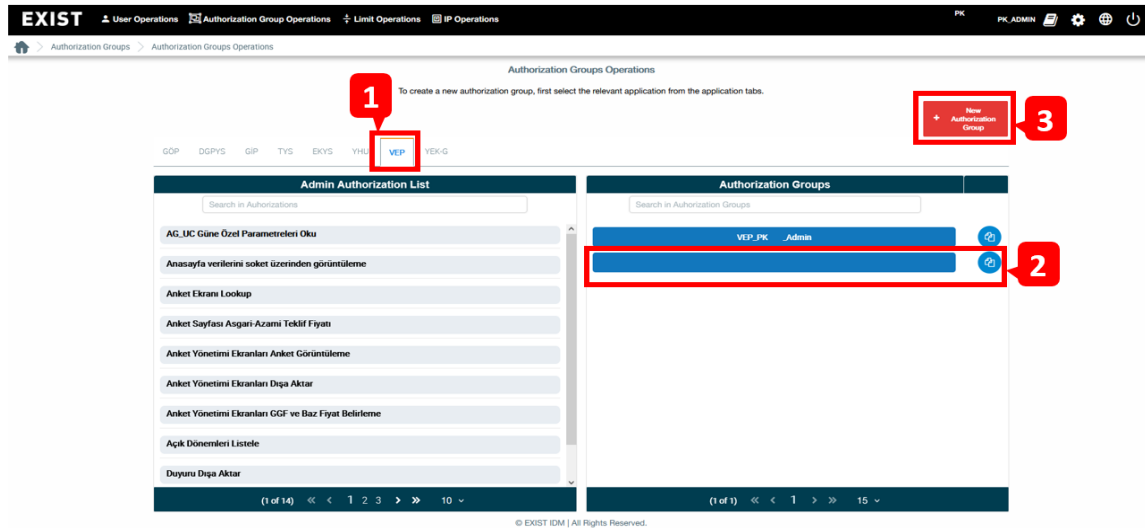

Figure 2: Creating Authorization Group

- 1- It is the section where the PK Admin selects the market for authorization. Authorizations regarding the selected market are displayed in the “Admin Authorization List”.
- 2- Groups to be authorized are displayed in the “Authorization Groups” section and the group is selected for authorization.

- 3- PK Admin can create a new authorization group by clicking the  button. After filling the relevant sections in the pop-up window, created group is displayed in the “Authorization Groups” section.

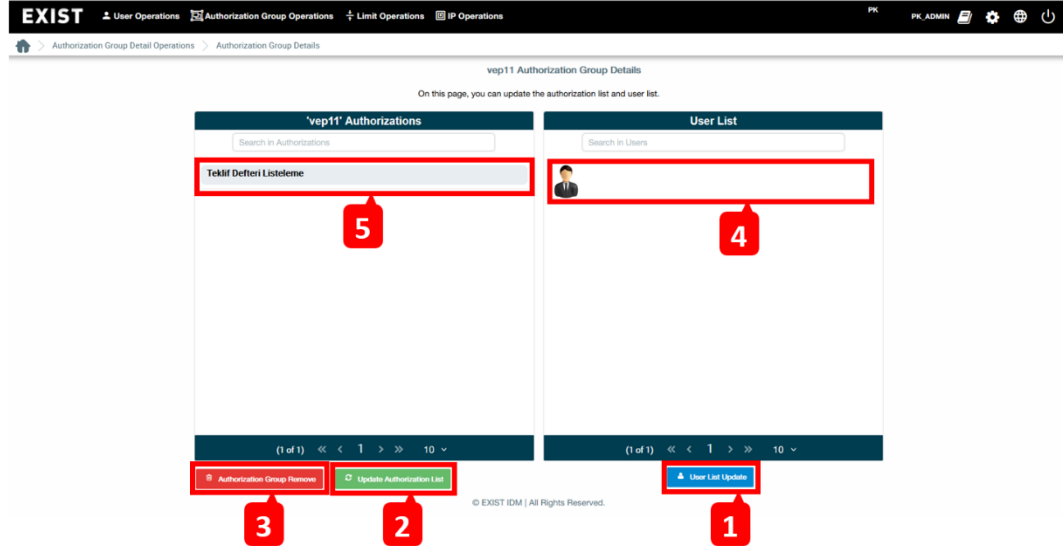

Figure 3: Authorization Group Details

- 1- It redirects to the page where the user(s) are selected for authorization.
- 2- It redirects to the page where the authorizations are selected for the users to be authorized.
- 3- It deletes the selected authorization.
- 4- It is the section where the user(s) selected from the “User List Update” page are displayed. Adding and removing user operations are made in the “User List Update” page.
- 5- It is the section where authorizations defined for the user(s) listed in the “User List” section are displayed.

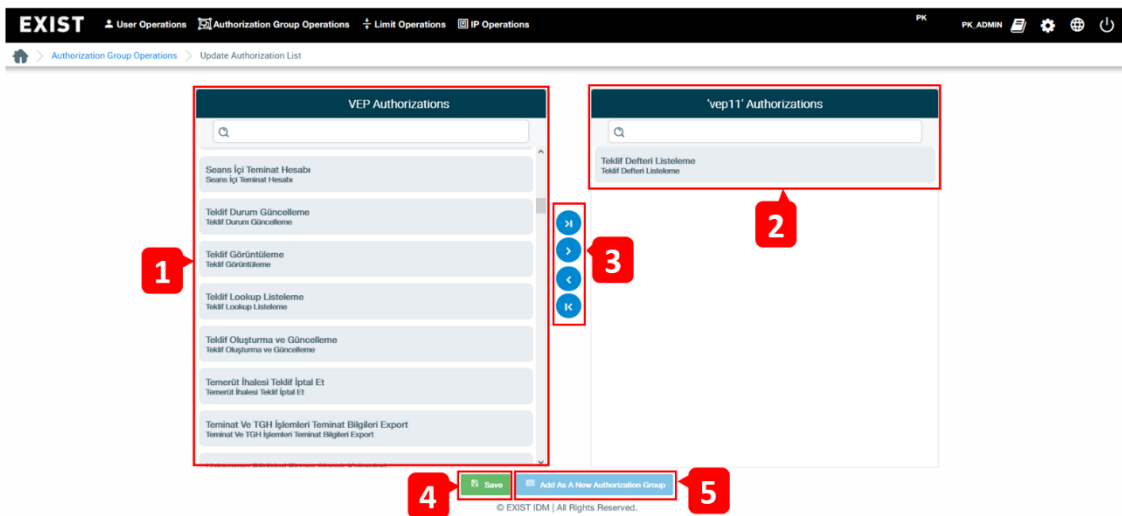

Figure 4: Updating and Defining Authorization List

- 1- It is the section where all the available authorizations are listed for the selected authorization group to

be defined.

- 2- It is the section where the authorizations selected from “VEP Authorizations” section are displayed.
- 3- It moves the selected authorization(s) to “VEP USER Authorizations” section. In this section it is possible to select the authorizations one by one or by clicking the  button all the authorizations can be moved.
- 4- It saves the selected authorizations for the selected group.
- 5- It enables to define the selected authorizations for a new added group.

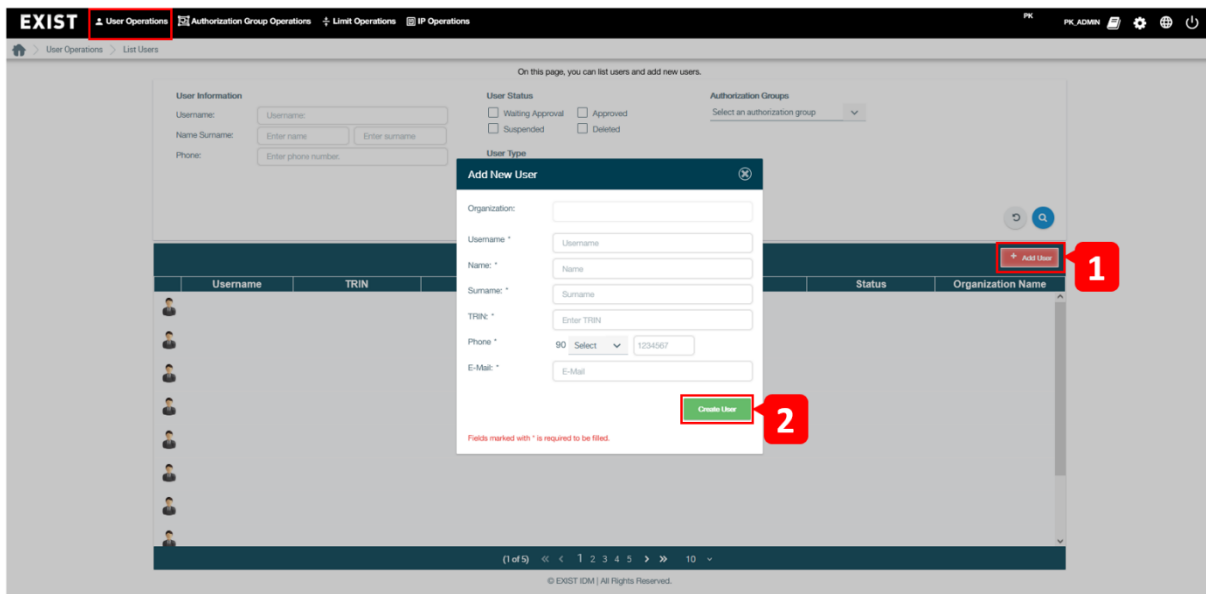

Figure 5: EKYS Adding New User

- 1- In the User Operations >> List Users section,  button opens the page where new user information is entered.
- 2- After entering the required information to “Add New User” pop-up, clicking “Create User” button creates new user. Created new user needs to be authorized.

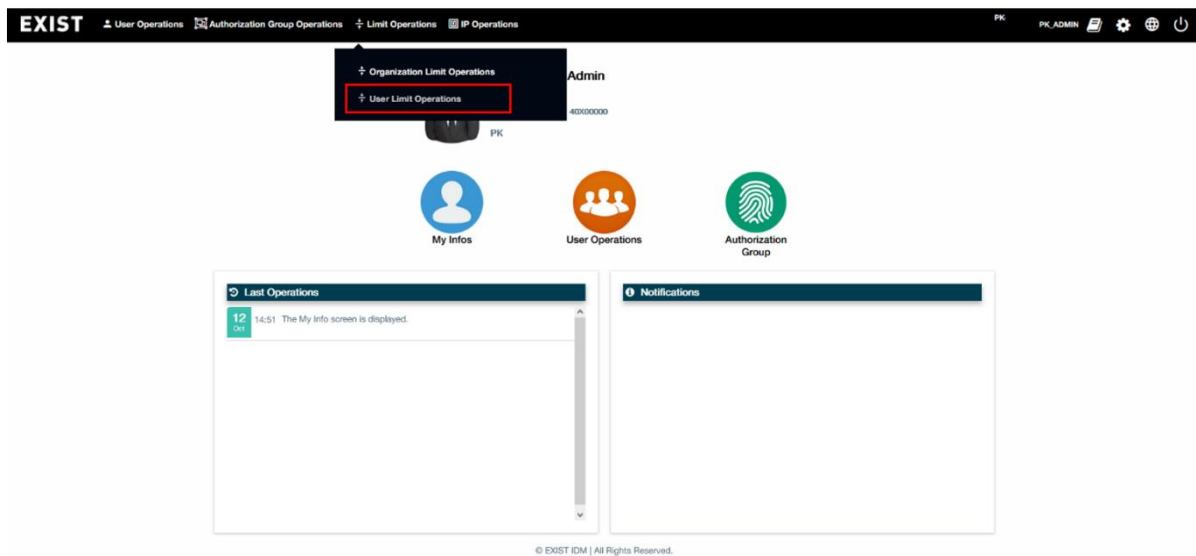

Figure 6: Introduction to User Upper Limit Operations

- PK Admin is redirected to the page where PK Admin can define sub-user and PK Admin upper limits.

Figure 7: User Upper Limit Operations

- 1- It is the section where PK Admin selects the user(s) for defining user upper limits. User name can be searched from the search section. User upper limits can not be defined without selecting the relevant user(s).
  - 2- It is the section where the market is selected for defining user upper limits for the selected user(s).
  - 3- It is the section where buy and sell order quantity limits are defined based on the delivery period.
- Organization limit is calculated and defined by the market operator and PK Admin is able to enter upper limits within the defined organization limits.
  - 4- PK Admin saves the defined values.

Figure 8: Determining User Limits

- 1- It is the section where the market is selected for defining user limits by sub-user or PK Admin user.
  - 2- It is the section where buy and sell order quantity limits are defined based on the delivery period within the limits determined by the PK Admin.
- User can not enter a value out of the limits defined by the PK Admin.
  - 3- It saves the limits defined by the user.
  - 4- It cancels the limits defined by the user.

## 2. Market Operations

### 2.1. Dashboard

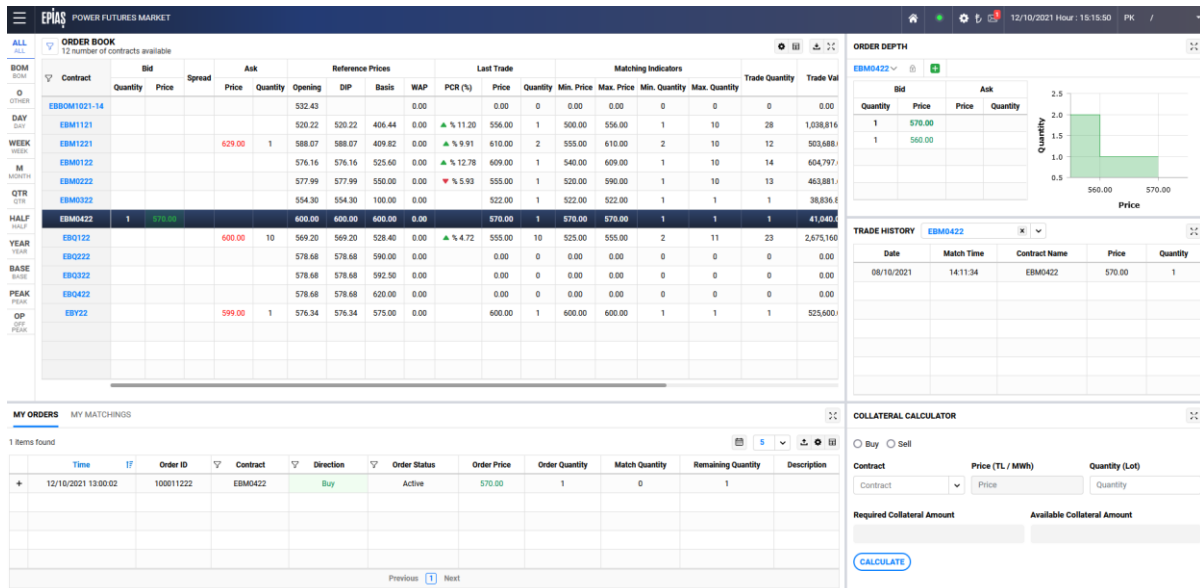

Figure 9: Dashboard

#### 2.1.1. Dashboard Header

Figure 10: Dashboard Header

- 1- icon lists “Market Operations”, “Collateral Operations”, “Default Operations”, “Settlement Operations” titles. Under each title, pages related to corresponding title take place.

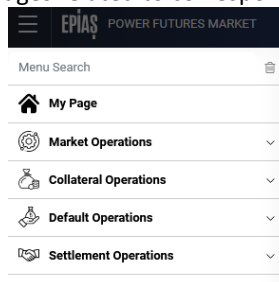

Figure 11: Menu Titles

- 2- icon signals that PFM application is active for submitting orders, system is running and access is granted.
- 3- icon opens the settings window. “Settings”, “Region”, “Language” ve “User Guide” titles take place in the window.

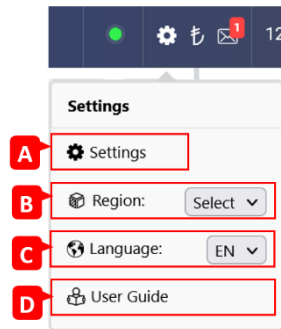

Figure 12: Settings

- A- Opens the window where general, theme, style and description settings can be made
- B- Region is selected. Operations can be made for the selected region.
- C- Application's language is selected.
- D- User guide of the application takes place.

Figure 13: General Settings

- A- The maximum number of orders to be displayed in the order depth for each order direction is determined.
- B- It is the duration of the system notification's appearance on the screen.
- C- It forwards to the EKYS page where the intraday matching notification type is set. User is notified for the matchings according to the selected notification type in the relevant page.
- D- Determined settings are saved.

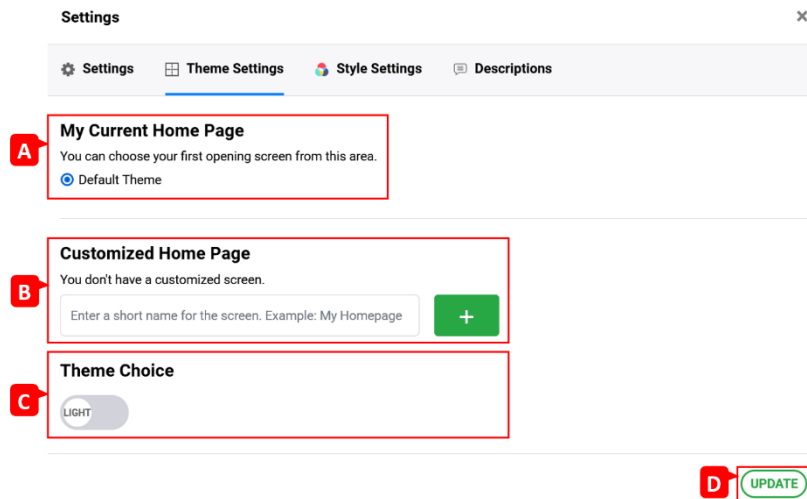

Figure 14: Theme Settings

- A- If the customized homepage is created, customized homepage and default theme selections take place, otherwise default theme selection takes place. User can select one of them.
- B- In addition to the default theme determined by the Market Operator, user can design and save a customized homepage.
- User enters the name of the customized homepage and by pressing  button, the name of the homepage to be customized is listed under “My Current Homepage” section.

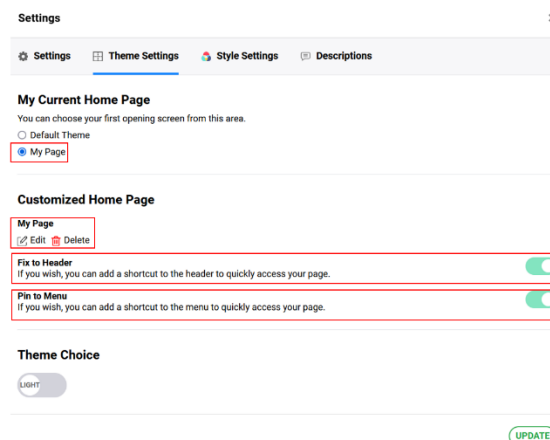

Figure 15: Creating Customized Home Page

- “Edit” opens the screen where the customized homepage can be designed. “Delete” cancels the creation of customized homepage.
- Fix to Header: If the button is activated, customized homepage is fixed to header. When it is fixed,  icon appears in the header. This button opens the screen where the customized homepage can be designed.

Figure 16: Customized Home Page Icon on the Header

- Pin to Menu: If the button is activated, customized homepage is listed in the menu bar.

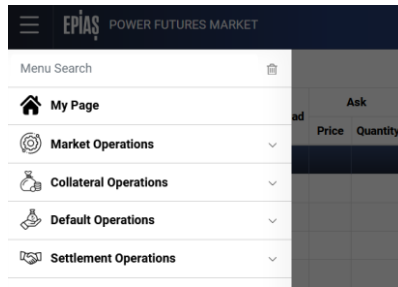

Figure 17: Customized Homepage on the Menu Bar

- Customized homepage is accessible from customized homepage section or header. If the customized homepage is created for first time, “edit” button opens the screen where the template selections appear.

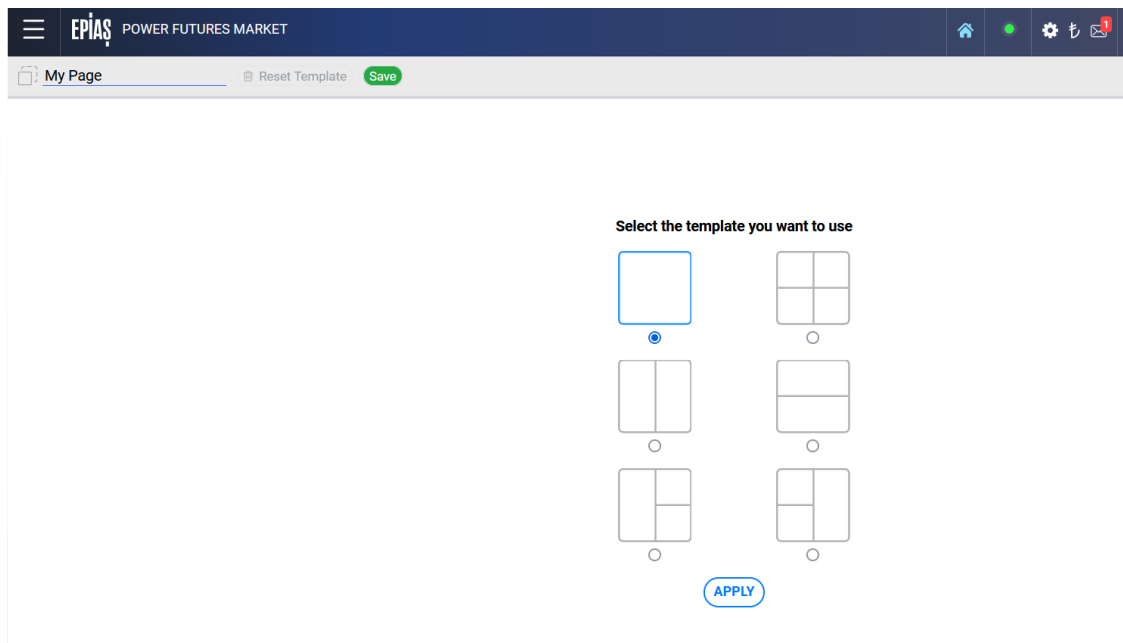

Figure 18: Customized Homepage Template Selection

- The selected template appears in the page that will be customized.

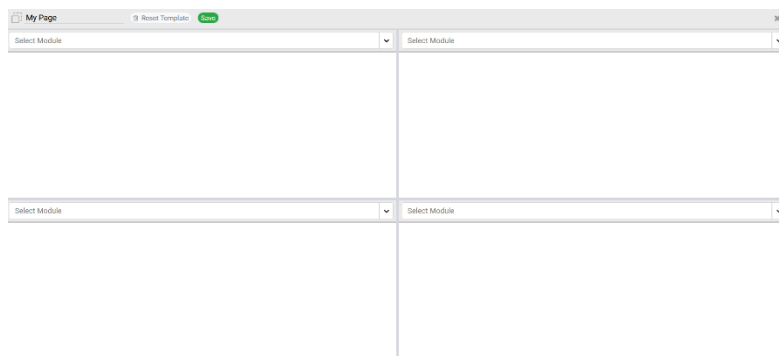

Figure 19: Customized Homepage

- According to the selected template, the page is splitted into sections and modules that are available for selection are listed in the “Select Module” menu on the top of each section. For each section separate modules can be selected. Each section can be splitted vertically and horizontally or sections can be merged.

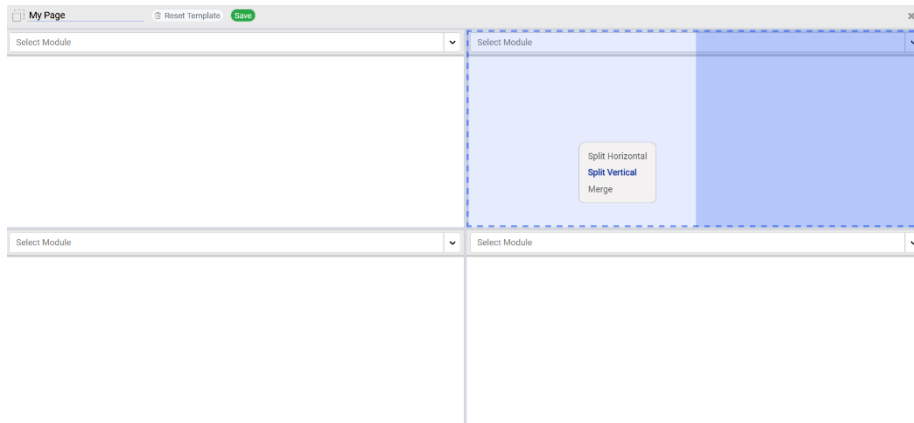

Figure 20: Splitting and Merging Customized Homepage Sections

- Previously saved customized homepage can be saved with a new name or by resetting the template a new design can be saved.

Figure 21: Customized Homepage

- C- Applications theme color can be changed. There are two selections: “Light” and “Dark”.
- D- Determined settings are saved.

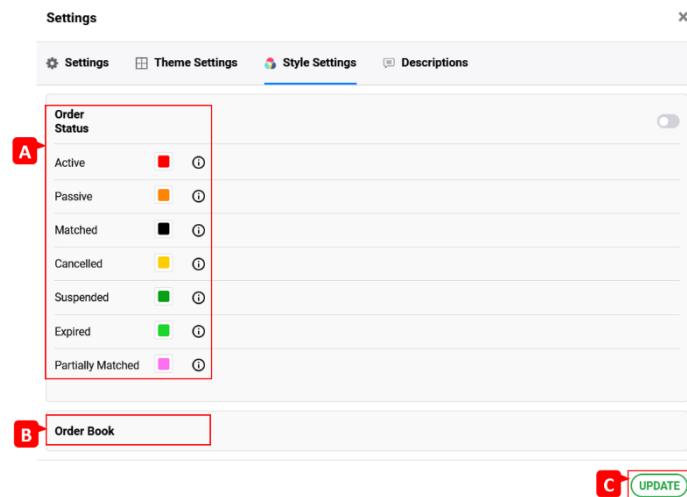

Figure 22: Style Settings

- A- Different colors can be set for order statuses. Colors set for order statuses are displayed in Dashboard >> My Orders section. ☒ button needs to be active in order to display colors belonging to order statuses.
- B- Column frames between the headings in the order book can become more apparent by activating the selection.
- C- Determined settings are saved.

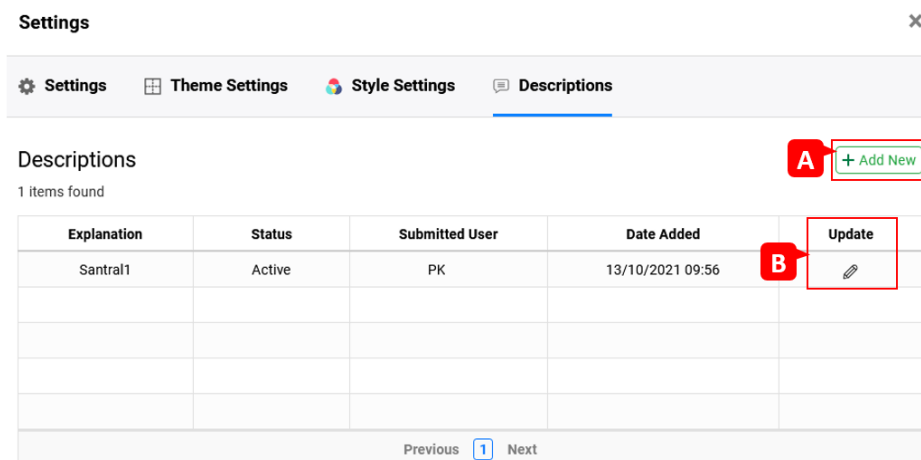

Figure 23: Settings - Descriptions

It is the section where the user saves its descriptions to be used in the description field of the order entry pop-up. Information regarding saved descriptions are listed.

- A- User can add multiple descriptions. By clicking  button, the pop-up appears where the description needs to be written and user writes the text and saves it.
- B- User can update the saved description. In the update section text can be updated and the status of the saved descriptions can be made passive.

Figure 24: Dashboard Header-2

- 4- It is the link for the current collateral display area. By clicking the icon, organization's current collateral is displayed in the pop-up window.

Figure 25: Current Collateral Display Section

- 5- It is the link for the announcements and notifications. Market operator's announcements are displayed in the announcement section. System notifications are displayed in the notifications section.

Figure 26: Announcements and Notifications Section

- 6- It is the section where the current date and hour information are displayed.
- 7- When a user logs in the application, the username and the organization's short name are displayed.
- 8- It shows the links to the user logs page and log out. If the organization is in default state, the username and the short name of the organization are written in yellow color.

Figure 27: Order Book

It is the section where the user submits bid and ask orders for the active contracts. Contract statistics are displayed in this section.

- **Contract:** Active and suspended contracts which are determined by the market operator are displayed.
- **Bid Price:** It shows the best bid's price for the relevant contract. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Bid Quantity:** It shows the best bid's quantity for the relevant contract. If there are multiple bids having the same best bid's price, then the sum of their quantities are displayed. The unit of the quantity is "Lot".

- 1 Lot equals to 0,1 MW.
- **Spread**: It refers to the difference between the best ask's price and best bid's price for the relevant contract. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **Ask Price**: It shows the best ask's price for the relevant contract. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **Ask Quantity**: It shows the best ask's quantity for the relevant contract. If there are multiple asks having the same best ask's price, then the sum of their quantities are displayed. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
  - **Opening**: It refers to the daily opening price of the relevant contract. Opening price is used for calculating the daily price change limits which indicates the valid price range for the orders on that particular day. Opening price is equal to the calculated DIP on the previous seance day. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **DIP (Daily Index Price)**: It is calculated by the matchings on the relevant contract. If the total quantity of the matchings is insufficient, then it is calculated according to the market rules defined by the regulation. It determines the opening price of the following seance day. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **Basis**: It refers to the first opening price of relevant contract unless a new basis price is determined. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **WAP**: It is the weighted average price of the matchings on the relevant contract within the seance. WAP is updated as a result of each matching within the seance. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **PCR (Price Change Ratio)**: It is the change ratio of the last matching's price compared to the previous matching price.
    - a-  It shows that the last matching price is higher than the previous matching price.
    - b-  It shows that the last matching price is equal to the previous matching price.
    - c-  It shows that the last matching price is lower than the previous matching price.
  - **Last Trade - Price**: The last matching's price on the relevant contract is displayed. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **Last Trade - Quantity**: The last matching's quantity on the relevant contract is displayed. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
  - **Matching Indicators - Min. Price**: The minimum matching price on the relevant contract is displayed. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **Matching Indicators - Max. Price**: The maximum matching price on the relevant contract is displayed. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **Matching Indicators - Min. Quantity**: The minimum matching quantity on the relevant contract is displayed. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
  - **Matching Indicators - Max. Quantity**: The maximum matching quantity on the relevant contract is displayed. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
  - **Trade Quantity**: The total matching quantity on the relevant contract is displayed. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
  - **Trade Value**: The total value of the matchings on the relevant contract is displayed. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **Open Position Quantity**: Open position quantity on the relevant contract is displayed. The unit of the

quantity is “Lot”. 1 Lot equals to 0,1 MW.

- **Daily Matching - Quantity:** The total matching quantity on the relevant contract within the seance is displayed. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
- **Daily Matching - Count:** The total number of matchings on the relevant contract within the seance is displayed.
- **My Net Position:** It is the difference between the organization’s total buy matchings quantity and total sell matchings quantity on the relevant contract. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.

Figure 38: Order Creation Pop-Up in the Order Book

- 1- Selected contract's name is displayed in the order creation pop-up.
- 2- Organization's available collateral amount is displayed.

- 3- Order direction is selected in this section by the user. Buy or sell can be selected.
- 4- User can enter the price within the range. The range is determined by increasing and decreasing the opening price by 7%. Order having price out of this range will not be saved.
- 5- User can enter the quantity within the range determined by the market operator. At the moment the range is from 1 to 100.
- 6- User can write a description for the order or select a description which is previously saved in the settings.
- 7- User can select an order type.
- 8- It determines the order's expiry time. The order remains active until the expiry time unless it is matched, made passive or canceled.
- 9- "BUY/SELL" button becomes "BUY" if the order direction is selected as buy. It becomes "SELL" if the order direction is selected as sell. Order is saved with this button.
- 10- It is possible to save the order by selecting "IOC" , " FOK" , "Expiry" , "Passive".
  - a- IOC(Immediate or Cancel): Order is saved with IOC. The order matches with the suitable orders immediately. Partial match is allowed. If there is remaining quantity unmatched, the remaining quantity of the order is canceled immediately.
  - b- FOK(Fill or Kill): Order is saved with FOK. The order is executed immediately, if the total quantity of the order is not matched then the order is canceled.
  - c- Expiry: It activates the "Expiry Time" section.
  - d- Passive: The status of the order becomes passive and it does not match.
- If the best bid belongs to the user's organization, the best bid price has a green shade and the price is displayed as bold.
- If the best ask belongs to the user's organization, the best ask price has a red shade and the price is displayed as bold.

Figure 47: Dashboard – My Orders – Order History

- **Time:** It displays the order’s operation time. icon located on the “Time” heading sorts the orders based on time from old to new or from new to old.
- **Order ID:** Relevant order’s ID is displayed.

- **Contract**: It displays the contract that the order is submitted.  icon located on the “Contract” heading enables to filter contracts related to orders.
- **Direction**: It displays the direction of the order.  icon located on the “Direction” heading enables to filter directions of orders.
- **Order Status**: It displays the latest status of the order. User can make changes according to the status of the order. Possible changes are listed as follows;
  - a- Active -> Update-Deactivate-Cancel
  - b- Passive -> Update -Activate- Cancel
  - c- Cancelled -> -
  - d- Suspended -> Deactivate - Cancel
  - e- Expired -> -
  - f- Partially Matched -> Update (Remaining Quantity)- Deactivate - Cancel
  - g- Matched -> -
- In order to change the status of the order, the market participant needs to left click on the relevant row. According to the status of the order, available change options are listed. Desired change can be made by selecting one of the available options. Selected row is displayed in a different color.

The screenshot shows the 'MY ORDERS' section of a dashboard. It contains a table with 5 items found. The table has columns: Time, Order ID, Contract, Direction, Order Status, Order Price, Order Quantity, Match Quantity, Remaining Quantity, and Description. The fourth row is selected, and a context menu is open over it, showing options: Update, Deactivate, and Cancel. The selected row is highlighted in green.

	Time	Order ID	Contract	Direction	Order Status	Order Price	Order Quantity	Match Quantity	Remaining Quantity	Description
+	13/10/2021 13:20:22	100011288	ERQ122	Buy	Matched	600.00	1	1	0

Figure 48: Dashboard – My Orders – Changing Order Status

- Order updating pop-up window opens when the user selects the “Update”.
- User is able to update the price and the quantity of the relevant order. The order loses the order priority following the update expect decreasing the order quantity.
- User is not able to change the direction of the order in the order updating pop-up window.
- User is able to change the order status from active to passive.
- User is able to add a new description to the order.
- User is able to save the changes by clicking on the  button.
- User is able to cancel the changes by clicking on the  button.

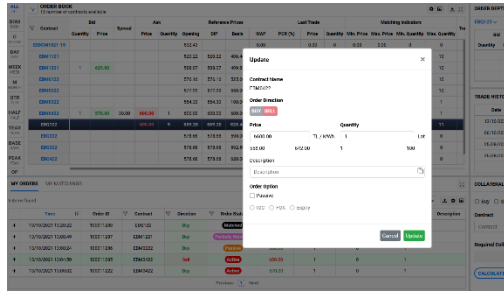

Figure 49: Dashboard – My Orders – Order Updating Pop-Up

- **Order Price**: It displays the price of the order. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Order Quantity**: It displays the quantity of the order. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
- **Match Quantity**: It displays the match quantity of the order. If the order status is partially matched, then the quantity of the last matching is displayed in the match quantity section. If the order is not matched, then it is displayed as “0”. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
- **Remaining Quantity**: It displays the remaining quantity of the order. If the order is matched, then the remaining quantity is displayed as “0”. If the order is partially matched, then the remaining quantity of the order is displayed. If the order is not matched, then the order quantity is displayed. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
- **Description**: It displays the text written in the description field while saving the order.

Figure 65: Trade Registration

- Organization is able to make a trade registration entry on an active contract by selecting a counterpart organization.
- Organization is able to update and cancel trade registrations pending for counterpart organization's

approval. Organization is able to reject and confirm trade registrations pending for its approval.

- Trade registration price is not included in the DIP calculations.

The screenshot shows the 'Trade Registration Entry' form. It has a header bar with 'Market Operations / Trade Registration Entry' and 'Trade Registration Entry'. Below this is a section titled 'Adding a New Trade Registration'. The form contains several input fields: 'Region' (a dropdown menu), 'Organization Name' (a text field), 'Counterparty Organization' (a dropdown menu), 'Contract' (a dropdown menu), 'Price(TL / MWh)' (a text field with a unit indicator), 'Quantity' (a text field with a unit indicator), 'Direction' (a dropdown menu), 'Description' (a dropdown menu), 'Opening Price' (a text field), and a 'Delete' button. There is also an 'Import' button in the top right corner. Below the input fields is a '+ Add New' button. At the bottom of the form are 'SAVE' and 'CLEAR ALL' buttons. Red numbered callouts (1-14) point to various elements: 1 points to the Region dropdown, 2 to the Organization Name field, 3 to the Counterparty Organization dropdown, 4 to the Contract dropdown, 5 to the Price field, 6 to the Quantity field, 7 to the Direction dropdown, 8 to the Description dropdown, 9 to the Opening Price field, 10 to the Delete button, 11 to the Import button, 12 to the '+ Add New' button, 13 to the SAVE button, and 14 to the CLEAR ALL button.

Figure 66: Trade Registration Entry

- 1- User selects the region for the trade registration.
- 2- The name of the organization is displayed for the user entering a trade registration.
- 3- It is the section where the counterparty organization is selected for trade registration by the user. Organizations having active market participation status are displayed.
- 4- It is the section where the contract is selected for the trade registration.
- 5- It is the section where the price is entered for the trade registration. The unit of the price is TL/MWh. It is sensitive to 2 decimal places. Price can be entered in the range of 0 – 2000 TL/MWh.
- 6- It is the section where the quantity is entered for the trade registration. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW. Quantity can be entered in the range of 1 – 100 lot.
- 7- It is the section where the direction is selected for the trade registration.
- 8- It is the section where the description is selected for the trade registration. In this section, two descriptions are listed. Descriptions: “ OTC” and “Trade Registration”.
- 9- It is the section where the current opening price is displayed for the selected contract.
- 10- Multiple trade registrations can be entered. The button deletes the trade registration entry on the relevant row.
- 11- It enables to upload multiple trade registrations. After filling the excel template with the relevant values, the excel file needs to be uploaded in the pop-up window. Trade registration entries are saved following the verification of trade registration entries.

The screenshot shows an Excel spreadsheet titled 'Multiple\_Trade\_Registration\_Entry\_Template - Excel'. The spreadsheet contains a table with columns for Region, Counterparty, Contract, Direction, Quantity, Price, and Description. The table is used for uploading multiple trade registrations. The table has 10 columns (A-J) and 21 rows (1-21). The first 8 rows are for inputting trade registration details. The last 13 rows (9-21) are for uploading multiple trade registrations. The table structure is as follows:

No	Region	Counterparty	Contract	Direction	Quantity(Lot)	Price(TL/MWh)	Description

Figure 75: Rejected and Cancelled Trade Registrations

- Trade registrations cancelled by the organization/market operator or rejected by the counterparty organization are displayed in the “Rejected and Cancelled Trade Registrations” section.
- Rejected and Cancelled Trade Registrations List: It displays the number of items listed in the “Rejected and Cancelled Trade Registrations” section.
- By clicking on the **+** icon on the row, the operation history of the rejected or cancelled trade registration is displayed.
- **Region**: It displays the region of the relevant trade registration.
- **Organization Name**: It displays the name of the organization which enters the trade registration in the “Trade Registration Entry” section.
- **Counterparty Organization**: It displays the name of the counterparty organization which is selected by the organization entering the trade registration.
- **Register ID**: It displays Register ID created for each saved trade registration entry.
- **Confirm ID**: It displays Confirm ID created for each approved trade registration entry. Each approved trade registration has a Confirm ID.
- **Contract**: It displays the name of the contract selected in the “Trade Registration Entry” section.
- **Price**: It displays the price entered in the “Trade Registration Entry” section. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Quantity**: It displays the quantity entered in the “Trade Registration Entry” section. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
- **Direction**: It displays the direction selected in the “Trade Registration Entry” section.
- **Description**: It displays the description selected in the “Trade Registration Entry” section.
- **Operation Time**: It displays the time that the trade registration entry is rejected or cancelled.

- **Username**: It displays the names of the organizations and the system.
- **Opening Price**: It refers to the daily opening price of the contract regarding the trade registration entry. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Status**: It displays the latest status of the trade registration.
- **Version**: It displays the latest version of the trade registration. Other versions are displayed in the detail section.

Figure 76: Auction Management

- User is able to submit an order for the contract in the DIP or Basis Price Auctions which are initiated by the market operator.
- The order submitted by the user is valid for its organization.
- The orders submitted in the auction are only valid for relevant auction.
- Bid and ask orders are submitted within the auction duration. Orders are matched according to the order priority and matching rules while the auction status is “Evaluating”.
- If the market participant’s order is matched in the auction, this matching becomes a position for the relevant market participant. Market participant is responsible from its matchings occurred in the auction.
- Market participant is able to submit bid and ask orders within the auction period. Market participant is not able to submit self-matching bid and ask orders.
- The user can update or cancel the orders submitted to the auction.
- If the organization has a matching in the auction, the organization can make an objection to its matching.
- Active auctions are displayed in the “Auction Management” Page unless a date is selected.

Figure 77: Auction Management Filter

- 1- It is the section where the date is selected. Active, cancelled and closed auctions are displayed for the selected date.
- 2- Price type of the auction is selected. Basis Price and DIP are the two available price types.
- 3- Contracts that have active, cancelled and closed auctions are listed in the contract filter.
- 4- Data regarding the auction(s) is displayed for the selected filters.

Figure 78: Auction Method Book

- **Contract**: It displays the contracts that has an DIP-Basis Price Auction on it.

Figure 79: Auction Management Order Entry Pop-Up Window

- For submitting order to the auction, clicking on the contract name opens the order entry pop-up window.
  - A- It displays the available collateral amount during the order submission. The unit of the amount is TL. It is sensitive to 2 decimal places.
  - B- Order direction is selected for the order. There are two order directions: “Buy” and “Sell”.
  - C- It is the section where the order price is entered. Price can be entered in the range of 0 – 2000 TL/MWh. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - D- It is the section where the order quantity is entered. Quantity can be entered in the range of 1 – 100 lot. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
  - E- It is the section where the description is written.
  - F- After entering the values to the required sections, order is saved by clicking the “BUY/SELL”. If “BUY” is selected in the order direction section, the button appears as “BUY”. If “SELL” is selected in the order direction section, the button appears as “SELL”.
- **Price Type**: It displays the type of the auction. Auction type: DIP or Basis Price Auction.
- **Auction Status**: The status of the auction is displayed. The status of the auction can be active,

cancelled, closed. If the auction is active, it has the statuses of pending, active, evaluating, object and answer objection. Auction status of each contract is independent.

- a- Cancelled: It states that the auction is cancelled by the market operator. Orders and matchings of the cancelled auction become invalid.
- b- Closed: It states that the auction is finished and closed.
- c- Active: It states that the auction is open for submitting order.
- d- Pending: It is the status before the auction becomes active.
- e- Evaluating: It states that the orders submitted to the auction are evaluated following the end of the auction order entry time. Orders are evaluated according to order entry time and price.
- f- Object: It states that it is possible to object to auction matching. In this status, pre-objection results regarding the relevant contract are displayed.
- g- Answer Objection: It states that the market operator is answering the objections. Auction status becomes closed following the "Answer Objection" status ends.
- **Bid Quantity**: It displays the quantity of the bid order submitted to the auction for the relevant contract. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
- **Bid Price**: It displays the price of the bid order submitted to the auction for the relevant contract. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Ask Price**: It displays the price of the ask order submitted to the auction for the relevant contract. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Ask Quantity**: It displays the quantity of the ask order submitted to the auction for the relevant contract. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
- **Reference Prices Opening**: It displays the current opening price of the relevant contract. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Reference Prices DIP**: It displays the current DIP of the relevant contract. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Reference Prices WAP**: It displays the weighted average price of the auction matchings. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Last Trade Price**: It displays the matching price of the last matching in the auction. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Last Trade Quantity**: It displays the matching quantity of the last matching in the auction. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
- **Matching Indicators Min. Price**: It displays the minimum matching price of the matchings in the auction. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Matching Indicators Max. Price**: It displays the maximum matching price of the matchings in the auction. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Matching Indicators Min. Quantity**: It displays the minimum matching quantity of the matchings in the auction. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
- **Matching Indicators Max. Quantity**: It displays the maximum matching quantity of the matchings

in the auction. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.

- **Trade Quantity**: It displays the total matching quantity of the auction for the relevant contract. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
  - **Trade Value**: It displays the total matching value of the auction for the relevant contract. The unit of the value is TL.
  - **Calculated Value**: Weighted average price of the matchings calculated after the objections are answered is displayed in this section if the market operator publishes it for the contract. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **Auction Start Time**: It displays the auction start time for the relevant contract.
  - **Auction End Time**: It displays the auction end time for the relevant contract.
  - **My Net Auction Position**: It displays the net auction position based on the auction matchings after the auction is closed.
-  icon exports the data displayed in the “Auction Method Book” section.
  -  icon enables to drag and pin the columns displayed in the “Auction Method Book” section.
  -  icon enables to hide or add columns displayed in the “Auction Method Book” section.

### 2.4.2. Auction Management My Orders and Matchings

#### 2.4.2.1. Auction Management My Orders

[illegible]

Figure 80: Auction Management My Orders

- It displays the orders and matchings data for the selected date and contract in the “Auction Management My Orders” section.
- **Time**: It displays the time for the latest status of the auction order.
- **Contract**: It displays the contract that the relevant order is saved for the auction.
- **Direction**: It displays the direction of the order submitted to the auction.
- **Order ID**: ID of the order submitted to the auction is displayed.
- **Order Status**: It displays the status of the order submitted to the auction. Order Status: Active, cancelled, matched, partially matched, expired, passive and suspended.
- **Order Price**: It displays the price of the order submitted to the auction. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Order Quantity**: It displays the quantity of the order submitted to the auction. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
- **Match Quantity**: It displays the match quantity of the order submitted to the auction. The unit of

the quantity is "Lot". 1 Lot equals to 0,1 MW.

- **Remaining Quantity:** It displays the remaining quantity of the order submitted to the auction. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
- **Description:** It displays the description written in the order entry pop-up window of the auction.
-  icon enables to drag and pin the columns displayed in the “Auction Management My Orders” section.
-  icon enables to hide or add columns displayed in the “Auction Management My Orders” section.
-  icon opens the “Auction Management My Orders/My Matchings” section in a separate pop-up window. The size of the pop-up window can be changed.

Figure 81: Auction Management My Matchings

- It is the section where the auction matchings are displayed and objection is made for the matching.
- **Match Time**: It displays the match time of the matching.
- **Contract**: It displays the contract that the relevant order is matched in the auction.
- **Direction**: It displays the direction of the order matched in the auction. There are two directions: Buy and Sell.
- **Order ID**: ID of the order matched in the auction is displayed.
- **Match ID**: Match ID of the matching is displayed.
- **Match Price**: Match price of the matching is displayed. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Match Quantity**: Match quantity of the matching is displayed. The unit of the quantity is "Lot". 1 Lot equals to 0,1 MW.
- **Match Status**: It displays the status of the matching. There are two match statuses: "Valid" and "Invalid". If the matching is valid, then the match status is displayed as "Valid". If the matching is invalid, then the match status is displayed as "Invalid".
- **Objection**: It is the section where the user makes an objection to its auction matching. If the status of the auction is "Object", an objection can be made for the matching. "Object" button will be active. Objection for a matching can be made by clicking the button and entering the objection description. If an objection is made, "Object" button changes into "Objected". Answer for the auction objection should be monitored in the "Objections" page.

-  icon enables to drag and pin the columns displayed in the “Auction Management My Matchings” section.
-  icon enables to hide or add columns displayed in the “Auction Management My Matchings” section.
-  icon opens the “Auction Management My Orders/My Matchings” section in a separate pop-up window. The size of the pop-up window can be changed.

### 2.4.3. Auction Management Trade History

Date	Match Time	Price	Quantity

Figure 82: Auction Management Trade History

- It is the section where all the matchings are displayed for the selected contract.
- **Date**: It displays the date of the matching on the relevant contract.
- **Match Time**: It displays the match time of the matching on the relevant contract.
- **Price**: It displays the matching price of the matching. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Quantity**: It displays the matching quantity of the matching. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
-  icon enables to drag and pin the columns displayed in the “Auction Management Trade History” section.
-  icon enables to hide or add columns displayed in the “Auction Management Trade History” section.
-  icon opens the “Auction Management Trade History” section in a separate pop-up window. The size of the pop-up window can be changed.

## 2.5. Survey Management

The screenshot shows the 'Survey Management' page. At the top, there's a breadcrumb 'Market Operations / Survey Management'. Below it is a 'Filter' section with three input fields: 'Date Range' (set to '14/10/2021'), 'Price Type' (set to '2 Item Selected'), and 'Contract' (set to 'Select'). A blue 'FILTER' button is to the right. Below the filter section, it says '1 Items found'. A table displays survey data with columns: Version, Username, Contract, Price Type, Survey Status, Last DIP, Last Basis Price, DIP Entry (0.00 - 2,000.00 TL), Basis Price Entry (0.00 - 2,000.00 TL), Calculated Price, Entry Time, Create Time, Start Time, Finish Time, and Operations. The first row shows a survey with Version 'PK', Username 'EBM0922', Contract 'Basis Price', Status 'Active', and a 'SAVE' button in the Operations column. A 'CLEAR' button is at the bottom left of the table.

Figure 83: Survey Management

- User is able to submit prices to contracts within the surveys opened by the market operator in order to determine DIP or Basis Price of the relevant contracts.
- Active and pending surveys are displayed unless a date is selected.
- When the date is selected, active, pending, closed and cancelled surveys are displayed for the selected date range.
- User is able to submit multiple prices to the survey until the survey end time. The latest submitted price is used for calculating the survey result.

This screenshot focuses on the filter section of the Survey Management interface. Red boxes and numbers highlight specific elements: 1 points to the 'Date Range' field, 2 points to the 'Price Type' dropdown, 3 points to the 'Contract' dropdown, and 4 points to the blue 'FILTER' button.

Figure 84: Survey Management Filter

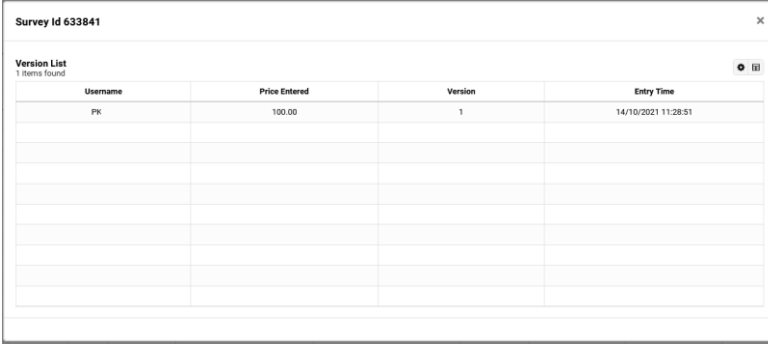

- 1- It is the section where the start date and end date are selected. Active, pending, closed and cancelled surveys are displayed within the selected date range.
- 2- Survey type (price type) can be selected. DIP and basis price types can be selected separately or together. Surveys are displayed according to the selected price type.
- 3- Available contracts are listed. Data regarding the selected contracts are displayed.
- 4- **FILTER** button displays the data according to selected filters.

The screenshot shows the table from Figure 83 with one data row. The row details are: Version 'PK', Username 'LUM0922', Contract 'Basis Price', Status 'Closed', Last DIP is empty, Last Basis Price is empty, DIP Entry is '100.00', Basis Price Entry is '-', Calculated Price is empty, Entry Time is '14/10/2021 11:28:51', Create Time is '14/10/2021 11:29:59', Start Time is '14/10/2021 11:28:00', and Finish Time is '14/10/2021 11:43:00'. The Operations column contains a 'SAVE' button. A 'CLEAR' button is at the bottom left.

Figure 85: Survey Management Order Entry

- Number of surveys filtered by the user is displayed.

- **Version**: The version list of the prices submitted to the survey is displayed for the organization. The latest submitted price is used for calculating the survey result.  button opens the pop-up window where the version list of the prices submitted to the survey for the relevant contract is displayed. All the prices submitted for the relevant contract are displayed. Username is the name of the organization's user who submits the relevant price on behalf of the organization.

Username	Price Entered	Version	Entry Time
PK	100.00	1	14/10/2021 11:28:51

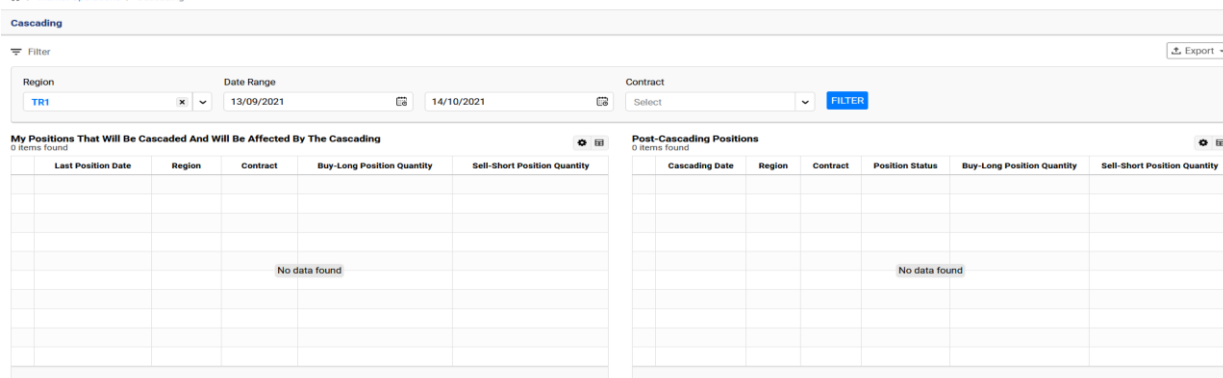

Figure 86: Survey Management Version List Pop-Up Window

- **Username**: Username is the name of the organization's user who submits the relevant price on behalf of the organization. The username corresponding to the last version is displayed.
- **Contract**: It displays the contract of DIP or basis price survey.
- **Price Type**: It displays the price type of the survey.
- **Survey Status**: It displays the status of the survey opened for DIP or basis price. Survey status can be active, pending, cancelled and closed.
- **Last DIP**: It displays the last DIP of the contract opened for survey. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Last Basis Price**: It displays the last basis price of the contract opened for survey. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **DIP Entry (0-2000 TL)**: It is the price submitted to the survey for determining the DIP. 0 – 2000 TL is the available range for submitting price. The unit of the price is TL/MWh. It is sensitive to 2 decimal places. Latest submitted price is displayed next to the section where the price for DIP is entered.
- **Basis Price Entry (0-2000 TL)**: It is the price submitted to the survey for determining the basis price. 0 – 2000 TL is the available range for submitting price. The unit of the price is TL/MWh. It is sensitive to 2 decimal places. Latest submitted price is displayed next to the section where the price for basis price is entered.
- **Calculated Price**: Following the end of the survey entry time, submitted prices are evaluated. It is the section where the calculated price is displayed if the market operator publishes the price for the relevant contract. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Entry Time**: It displays the price entry time for the relevant contract in the survey.
- **Create Time**: It displays the market operator's survey creation time for the relevant contract.
- **Start Time**: It displays the survey start time for the relevant contract.
- **Finish Time**: It displays the survey finish time for the relevant contract.

- **Operations:** “Save” button will be active when price is entered for the relevant contract.  button saves the submitted price.
-  button deletes the entered price before saving it. It deletes the values entered in the section.

## 2.6. Cascading

Market Operations / Cascading

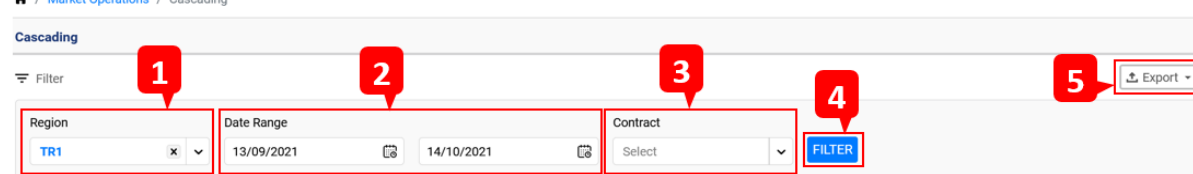

The screenshot shows the 'Cascading' page with the following elements:

- Filter Section:** Includes 'Region' (TR1), 'Date Range' (13/09/2021 to 14/10/2021), and 'Contract' (Select). A 'FILTER' button is present.
- My Positions That Will Be Cascaded And Will Be Affected By The Cascading:** A table with 0 items found. Columns: Last Position Date, Region, Contract, Buy-Long Position Quantity, Sell-Short Position Quantity.
- Post-Cascading Positions:** A table with 0 items found. Columns: Cascading Date, Region, Contract, Position Status, Buy-Long Position Quantity, Sell-Short Position Quantity.

Figure 87: Cascading

- It is the page where the contracts with long or short positions are cascaded on the cascading date (last trade day for the relevant contract).
- Cascading is the process of transferring the open positions from year contract to quarter contracts and from quarter contracts to month contracts. Following the cascading operation, the transferred positions and the open positions on the target contract are offset if those positions have opposite directions. Following the cascading operation, the transferred positions are added to the open positions on the target contract if those positions have the same direction.

Market Operations / Cascading

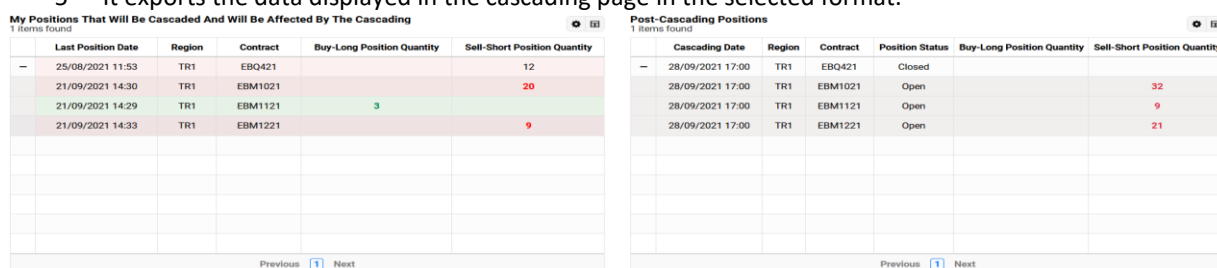

The screenshot shows the 'Cascading' page with numbered annotations:

- 1: Region dropdown menu.
- 2: Date Range input fields.
- 3: Contract dropdown menu.
- 4: FILTER button.
- 5: Export button.

Figure 88: Cascading Filter

- 1- Region is selected for the cascading operation.
- 2- Start date and end date are selected for displaying the cascading operation within the date range.
- 3- It is the section where the contract is selected for the cascading operation.
- 4- It displays the data according to selected region, date range and contract filters.
- 5- It exports the data displayed in the cascading page in the selected format.

The screenshot shows the 'Cascading Detail' page with two tables:

My Positions That Will Be Cascaded And Will Be Affected By The Cascading				
Last Position Date	Region	Contract	Buy-Long Position Quantity	Sell-Short Position Quantity
25/08/2021 11:53	TR1	EBQ421		12
21/09/2021 14:30	TR1	EBM1021		20
21/09/2021 14:29	TR1	EBM1121	3	
21/09/2021 14:33	TR1	EBM1221		9

Post-Cascading Positions					
Cascading Date	Region	Contract	Position Status	Buy-Long Position Quantity	Sell-Short Position Quantity

Previous 1 Next									

Figure 95: Net Positions Matching Details

- **Load Type**: It displays the load type of the contract having position on it. Positions are displayed separately for each load type.
- **Contract Name**: The name of the contract regarding the position is displayed.
- **Contract Status**: The status of the contract regarding the position is displayed. Contract status can be pending, active, suspended and closed.
- **Operation Time**: Creation time of the relevant position and matching is displayed.
- **Process Type**: The type of the matching on the relevant contract is displayed. Process types;
  - Matching
  - Synthetic Matching
  - Trade Registration
  - DIP Auction
  - Basis Price Auction
  - Default Matching
  - DAM Default Matching
  - Default Auction
  - Default Order Book
  - Default Position Allocation
- **Position Status**: The status of the position/matching is displayed. Position status:
  - Open; Position status is open for the matching quantities which are not offset by the matchings with opposite direction. The position is open if the position quantity on the net position is different from zero.
  - Closed; Position status is closed for the matching quantities which are offset by the matchings with opposite direction. The position is closed if the position quantity on the net position is zero.
- **Position Direction**: Direction of position is displayed as a result of the matchings composing the net position. Position direction can be “Buy-Long” , “Sell-Short” and “Net Position”.
- **Position Quantity**: The total quantity of the matchings composing the net position is displayed. If all the matchings have the same direction, then it is the total quantity of the matchings. If there are matchings with opposite directions on the contract, then the net position quantity after the offset is displayed in the net position row. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.

- **Open Position Match Price:** Match price of the net open position is displayed for the contracts having net open positions. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - o The weighted average matching prices of the matchings composing the net position is calculated as the open position match price.
  - o If the net position status is closed, open position match price is not calculated and it is displayed as blank.

## 2.7.2. Net Balance

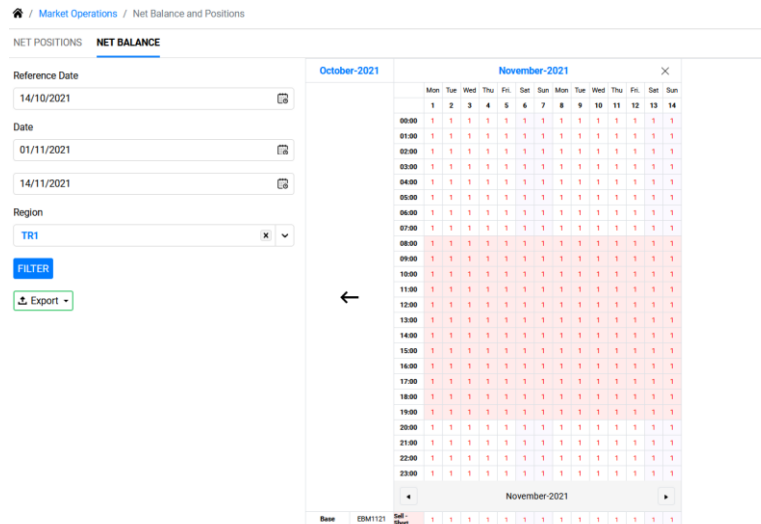

Figure 96: Net Balance

- Organization's hourly net balance is displayed for the filtered date range.
- Hourly net balance is calculated by offsetting the positions of the contracts covering the same delivery period. If the positions have opposite directions, they are offset and the remaining open position is calculated as the hourly net balance. If the positions have the same direction, then the total open quantity is calculated as the hourly net balance. Calculated hourly net balance is displayed.

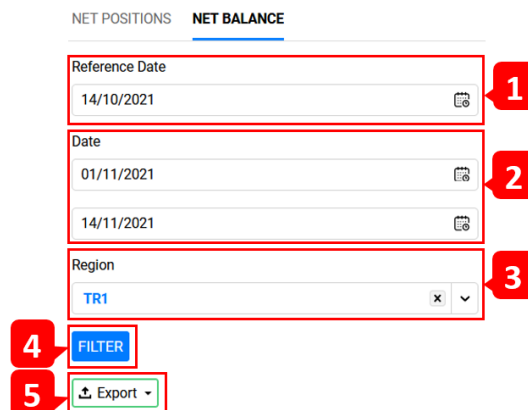

Figure 97: Net Balance Filter

- 1- End of day data for the selected date is displayed.
- 2- Net balance is displayed according to selected start and end dates.
- 3- Net balance is displayed for the selected region.

- [illegible]

- 1- It displays the delivery period(s) for the selected date range and previous&following delivery periods of the selected date.
- 2- It directs to the section where the data is displayed for the previous delivery period of the selected date.
- 3- Load type of contracts regarding the positions is displayed. Net balance is displayed separately for each load type.
- 4- Contracts having positions covering the selected dates are displayed. Each contract is displayed separately.
- 5- It directs to the section where the data is displayed for the following delivery period of the selected date.
- 6- Single click on the relevant hour opens the pop-up window where the details of all matchings are displayed for the selected hour.

## 2.8. Limit Management

### 2.8.1. Market Limits Screen

Year	Market Position Limit (Lot)	Market Hourly Limit Quantity (Lot)	New Market Position Limits
2021	1,722,000,000	196,575	Limit to come into force
2022	1,798,000,000	205,251	Limit to come into force
2023	1,879,000,000	214,497	Limit to come into force

-  icon enables to drag and pin the columns displayed in the “Contract Matching Prices” section.
-  icon enables to hide or add columns displayed in the “Contract Matching Prices” section.

**Date**: It displays the day or the days according to the selected filters.

**Contract**: It displays the contract that has valid matchings on it.

**Delivery Period**: It displays the delivery period of the relevant contract.

**Contract Status**: It displays the status of the relevant contract.

**First Price**: It displays the first match price of the relevant contract on the relevant day. The unit of the

price is TL/MWh. It is sensitive to 2 decimal places.

- **Highest Price:** It displays the highest match price of the relevant contract on the relevant day. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Lowest Price:** It displays the lowest match price of the relevant contract on the relevant day. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **Last Price:** It displays the last match price of the relevant contract on the relevant day. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **rWAP:** The weighted average price of matchings occurred in the order book, basis price auction, DIP auction and default order book is displayed. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **DIP/CRP:** It displays the daily index price (DIP) and collateral reference price (CRP) of the relevant contract on the relevant day. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.

The **Export** button in the window allows these tables to be downloaded in excel, pdf and csv formats.

### 3.1.4. Total Mark to Market Collateral (TMtMC)

Collateral Item					
CC	PDC	NL	TMtMC	PSCD	
Contract	MP (TL/MWh)	DIP (TL/MWh)	NPQ (Lot)	LMtMC (TL)	SMtMC (TL)
EBM0822	135.00	0.00	5	50,220.00	0.00
EBM1221	629.00	900.00	1	-20,162.40	0.00
EBM0422	570.00	900.00	1	-23,760.00	0.00

Figure 155: Total Mark to Market Collateral

In the TMtMC tab, the relevant contract, the weighted average price (AP) of the matches that constitutes the open position in the relevant contract, the Daily Index Price (DIP), the Net Position Quantity (NPQ), the mark to market collateral for the long positions (LMtMC), the mark to market collateral for the short positions (SMtMC) information are displayed.

### 3.1.5. Perfect Spread Position Collateral Discount (PSPCD)

Collateral Item					
CC	PDC	NL	TMtMC	PSCD	
Contract	MP (TL/MWh)	DIP (TL/MWh)	NPQ (Lot)	LMtMC (TL)	SMtMC (TL)
EBM0822	135.00	0.00	5	50,220.00	0.00
EBM1221	629.00	900.00	1	-20,162.40	0.00
EBM0422	570.00	900.00	1	-23,760.00	0.00

Figure 156: Perfect Spread Position Collateral Discount

In the PSPCD tab, the first column shows the spread number, the contract column shows the contracts included in the spread, the "DIP" column shows the daily index prices of the contracts included in the spread, the "Quantity" column shows the quantities subject to the spread, and the "PSPCD" column shows the perfect spread position collateral discount amount.

## 3.2. Intra Seance Collateral

Collateral Operations / Intra-Seance Collateral

Date  
02/11/2021 12:13

The values on this page are the amounts updated according to the transactions within the session. Go to the page [Collateral Information](#) for information on end of day collateral control.

Figure 157: Intra Seance Collateral

By clicking on the "In-Seance Collateral" link displayed in the Collateral Operations menu, the "Intra-Seance Collateral" page is opened, where the blocked collateral amounts calculated according to the transactions in the

seance are displayed.

- A- The required collateral amount before the seance, the current blocked amount calculated according to the transactions made during the seance and the current collateral amount information are included.
- B- Collateral items that make up the current blocked amount;
  - Initial Collateral (IC),
  - Contract Collateral (CC),
  - Physical Delivery Collateral (PDC),
  - Net Loss (NL),
  - Total Mark to Market Collateral (TMtMC),
  - Perfect Spread Position Collateral Discount (PSPCD).
- C- There is a collateral calculator that can be used to calculate the required collateral amount for a new order. "Buy" or "Sell" direction is selected, contract of the relevant order, order price and order quantity information is entered and the required collateral amount is calculated.

- 
- **Hour:** It displays the hour information of the relevant delivery day regarding the submitted order on behalf of the default organization.
  - **PFM Quantity:** It displays post-default matching open position quantity of the default organization. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
  - **PFM Open Position Price:** It displays post-default matching open position price of the default organization. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
  - **PFM Direction:** It displays post-default matching open position direction of the default organization.
  - **DAM Quantity:** It displays the cleared quantity of order submitted to DAM on behalf of the default organization. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
  - **DAM MCP:** It displays the DAM market clearing price for the relevant delivery day’s hour. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.

- **DAM Direction**: It displays the direction of the order submitted to DAM on behalf of the default organization.
- **IDM Quantity**: If the order submitted to DAM within the default management is curtailed, the remaining quantity is offered to IDM. It displays the matched quantity in the IDM. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
- **IDM Weighted Average Match Price**: It displays the weighted average match price of orders submitted to IDM within the default management. The unit of the price is TL/MWh. It is sensitive to 2 decimal places.
- **IDM Direction**: It displays the direction of the order submitted to IDM on behalf of the default organization.
- **Remaining Quantity**: It displays the remaining quantity calculated by subtracting the DAM and IDM quantities from PFM quantity for each hour. The unit of the quantity is “Lot”. 1 Lot equals to 0,1 MW.
